

MAC

VALVES

BAGHOUSE

DUST COLLECTION SEGMENT SOLUTION

Applications

- Valves actuate an air cylinder that opens and closes gates to purge the ash.
- Valves provide a short burst of air which breaks the dust cake, and the dislodged dust falls into a storage hopper below.

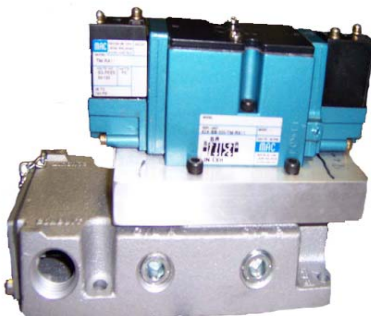

Challenges

- Dust contamination
- Direct mount to existing valve base

Solution

MAC 82, 6300 & 6500 series valves. A custom transition plate allows utilization of existing obsolete Mosier valve base and plumbing.

Customer Benefits

- Replacement for obsolete Mosier valve
- Easy transition
- Utilize existing valve base and plumbing
- More reliable valve

Cost Savings

Savings realized in labor cost and replacement of parts.
